

Installation Instruction For Micro Duct End Stop Connector

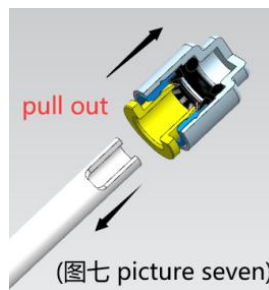

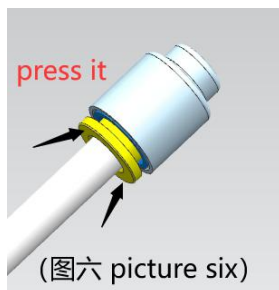

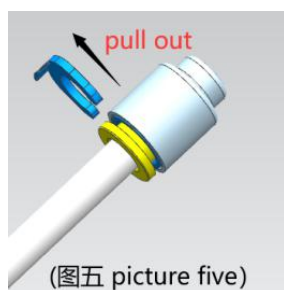

Working

- Cut the front end of the tube vertically before inserting it;
- The outer surface of the tube into which it is inserted shall be smooth and clean, free from scratches;
- Although there will be a feeling that the inserting is blocked before the tube is reached, insert it thoroughly to the tube stop;
- To insure the firm joint of the tube, try to pull out the tube at a suitable torque.
- The fittings are reusable.

Install Process

- (1) Cut the front end of the tube which is need to be inserted vertically (see the picture one)
 - *The surface of the tube which is needed to be inserted shall be smooth and clean and free from scratches.
 - *If there is scratch in the tube, the should be cut the tube with scratch vertically;
- (2) Insert the front end of the tube into quick connector, insert it deeply to the bottom. (see picture two and three)
- (3) In order to make sure if the connection is fastness, pull the tube with the correct force, it is ok when the tube couldn't be pulled out.
- (4) Put on the clips into the quick connector, in case to avoid, the tube be pulled out during the using in suddenness. (see picture four)

Disassembly process

- (1) Firstly check the infall tube and to see if it is shut off, make sure the pressure is zero;
- (2) Take off the clips (see picture five)
- (3) Press the collet into quick connector with forefinger (see picture six) and thumb with one hand while pull out the tube with another hand. (see picture seven)
